CARBON NEUTRALITY IN TRANSPORT SECTOR

What does it take?

- Competitive & robust technological solutions or alternative services
- Shared trajectories – MT visibility supported by clear regulatory framework (right metric...)
- Consider an extended scope: Life cycle and systemic approach
- Consistent and ambitious industrial strategy (localization, material supply...)
- Agile political instrumentation to initiate/foster the transition and manage social impact
- Manage dead angles and rebound effects (overcost & diversity)
- MT & LT visibilities are key for investments (Industry & Territories)
- No sector can be treated isolated: trans-sectorial approach required
- Treat simultaneously What and How: critical phases for 2022-2030
- Including Pan European consistency

EU27 status

Beware not to oppose techno changes and behaviour changes & frugality ➔ complementary
